SAFETY SUMMARY

Individuals who decide to perform their own repairs should have proper training and limit repairs to components which will not affect the safety of the vehicle or its occupants.

When replacement parts are required, it is strongly recommended that they are purchased through an authorized HUMMER dealer. It is essential that replacement parts meet or exceed manufacturer's specifications. Vehicle performance and personal safety may be impaired if other than original factory components are installed.

The installation of nonapproved accessories or conversions is not recommended as they could affect the vehicle's driving characteristics and personal safety. AM General Corporation will not be liable for personal injury or damage to property resulting from the installation of nonapproved accessories or conversions to the HUMMER.

Following the safety precautions as prescribed throughout this manual may greatly reduce the risks of personal injury and damage to the vehicle. However, it is unlikely that AM General Corporation will account for all possibilities.

Warnings, cautions, and notes are used throughout this service manual to assist service personnel in the performance of maintenance actions. These statements are designed as reminders for trained and experienced service personnel.

WARNINGS — Indicate potential safety hazards and must be followed to avoid personal injury. Warnings appear as follows:

> ***WARNING: To avoid injury, do not remove surge tank filler cap before depressurizing cooling system when engine temperature is above 190° F (88° C).***

CAUTIONS — Indicate potential equipment damage, and must be followed to avoid damage to components or systems. An example of a caution is shown below:

> **CAUTION:** To avoid starter damage, do not operate starter continuously for more than 15 seconds. Wait 10 to 15 seconds between periods of operation.

NOTES — Indicate methods or actions that may simplify vehicle maintenance or help maintain vehicle performance. An example of a note is shown below:

> **NOTE:** Clean all components, examine for wear or damage, and replace if necessary.

CARBON MONOXIDE

WARNING: Carbon monoxide (exhaust gases) can be fatal.

WARNING: Brain damage or death can result from heavy exposure to carbon monoxide. The following precautions must be followed to ensure personal safety.

1. Do not operate vehicle engine in enclosed areas. Do not idle the vehicle engine with vehicle windows closed. Be alert at all times for exhaust odors. Be alert for exhaust poisoning symptoms. They are:
   - Headache
   - Dizziness
   - Sleepiness
   - Loss of muscular control
2. If you see another person with exhaust poisoning symptoms:
   - Remove person from area
   - Expose to open air
   - Keep person warm
   - Do not permit physical exercise
   - Administer artificial respiration, if necessary
   - Notify medical personnel

The best defense against exhaust poisoning is adequate ventilation.

ABOUT THIS MANUAL

This service manual contains instructions for maintaining the 1997 commercial HUMMER. Spend some time looking through this manual. Features to improve the usefulness of this manual and increase your efficiency are:

Accessing Information - These include: tabulated sections for quick reference, extensive troubleshooting guides for specific systems, and step-by-step directions for service repairs.

Illustrations - A variety of methods are used to make locating and repairing components easy. Locator illustrations, exploded views, and cut-away diagrams make the information in this manual easy to understand.

The service manual is the best source available for providing information and data critical to vehicle operation and maintenance. In this manual you will find the following information:

- Safety Summary
- General Information
- General Service Procedures
- Detailed Service Procedures
- Torque Ranges
- Wiring Diagrams and Schematics

SERVICE MANUAL COMMENTS

HUMMER owners and dealership service personnel can submit service manual suggestions and comments in writing to:

AM General Corporation
Commercial Publications Department
408 S. Byrkit St.
P.O. Box 728
Mishawaka, IN 46546-0728

Forms are furnished at the end of this manual.

Service Manual Revisions

In order to receive future revisions to this service manual, please write to:

AM General Corporation
Service Parts Logistics Operations
Commercial Publications/Customer Service
408 South Byrkit Avenue
P.O. Box 728
Mishawaka, Indiana 46546-0728

(Be sure to specify publication number.)

HUMMER SERVICE HOTLINE

On occasion, an unusual service problem can arise that is not covered in the manual. For this reason, AM General Corporation has established a service hotline for dealership assistance. The hotline number is:

1-800-638-8303

Transfer Case Hotline

If you have questions that are not answered in Section 5 of this Service Manual, you can call the Transfer Case Hotline at 1-800-945-4327 (in the U.S.) for more information. International and Canadian customers and dealers should call 1-315-432-4110.

EMISSION CONTROL INFORMATION LABEL

The vehicle emission control label contains engine information such as curb idle rpm, engine displacement, catalytic converter type, fuel rate, and vacuum hose routing.

On NA diesel engines, the label is affixed to the driver side rocker arm cover.

On turbo diesel models, the label is affixed to the air cleaner housing (Figure 1-1).

SAFETY CERTIFICATION LABEL

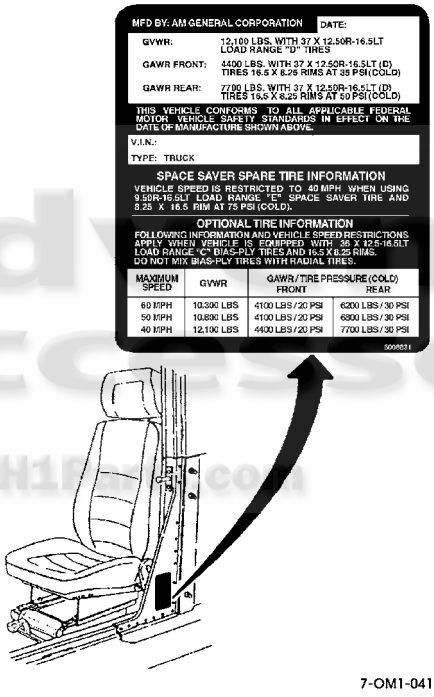

The safety certification label is located on the driver side B-pillar (door latch post) (Figures 1-2, 1-3, and 1-4). The label is required by the National Highway Traffic Safety Administration and includes a tamper-proof feature. If the label is tampered with, a void pattern will appear across the label.

The label contains the name of the manufacturer, the month and year the vehicle was manufactured, the certification statement, the vehicle identification number (VIN), and the vehicle model type. It also contains the Gross Vehicle Weight Rating (GVWR), Gross Axle Weight Ratings (GAWR), and wheel and tire information. For more information on the GVWR and GAWR, refer to "VEHICLE LOADING INFORMATION" in the Hummer Owner's Manual.

TRANSMISSION IDENTIFICATION

The 4L80-E automatic transmission serial number is located on a plate at the right side of the transmission (Figure 1-5).

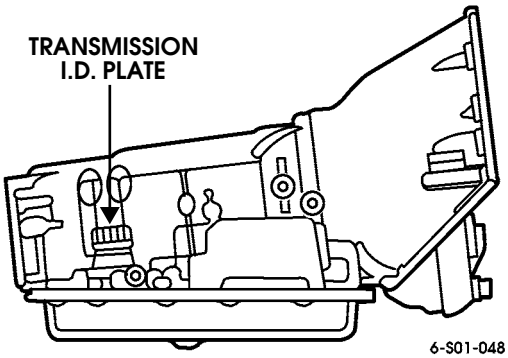

Figure 1-5: Transmission I.D. Plate Location

EPA NOISE EMISSION CONTROL INFORMATION LABEL

The EPA noise emission control information label is located on the passenger side B-pillar (door latch post). The label is required by the EPA and includes a tamper-proof feature. If the label is tampered with, a void pattern will appear across the label. Notify the dealer or the manufacturer if the label is missing or displays a void pattern (Figure 1-6).

The label contains the name of the manufacturer, the month and year the vehicle was manufactured, a statement regarding vehicle conformance to applicable U.S. EPA regulations, and a description of acts prohibited by the Noise Control Act of 1972.

TRANSFER CASE IDENTIFICATION

The transfer case serial and assembly numbers are located on a tag attached to the rear case (Figure 1-7).

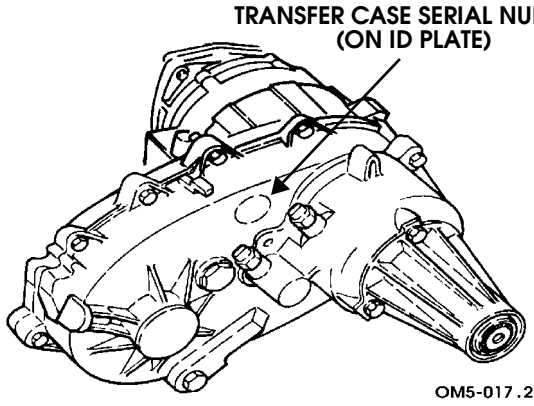

Figure 1-7: Transfer Case I.D. Plate Location

ENGINE IDENTIFICATION

The diesel engine serial number label is located at the rear of the left cylinder head (Figure 1-8).

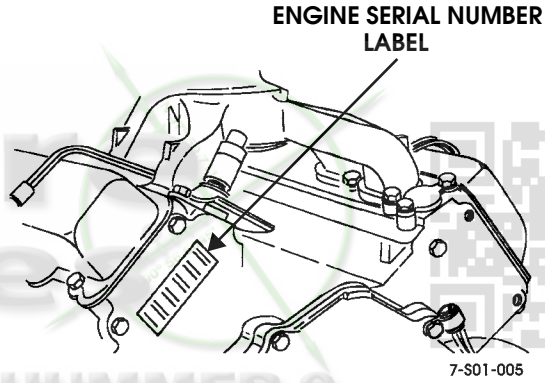

Figure 1-8: Engine I.D. Label Location

VEHICLE IDENTIFICATION NUMBER (VIN)

The VIN plate is located at the upper left front corner of the dashpad (Figure 1-9).

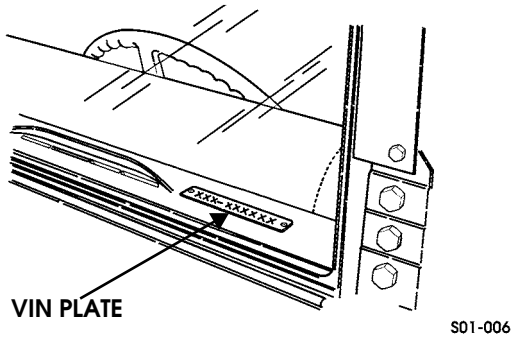

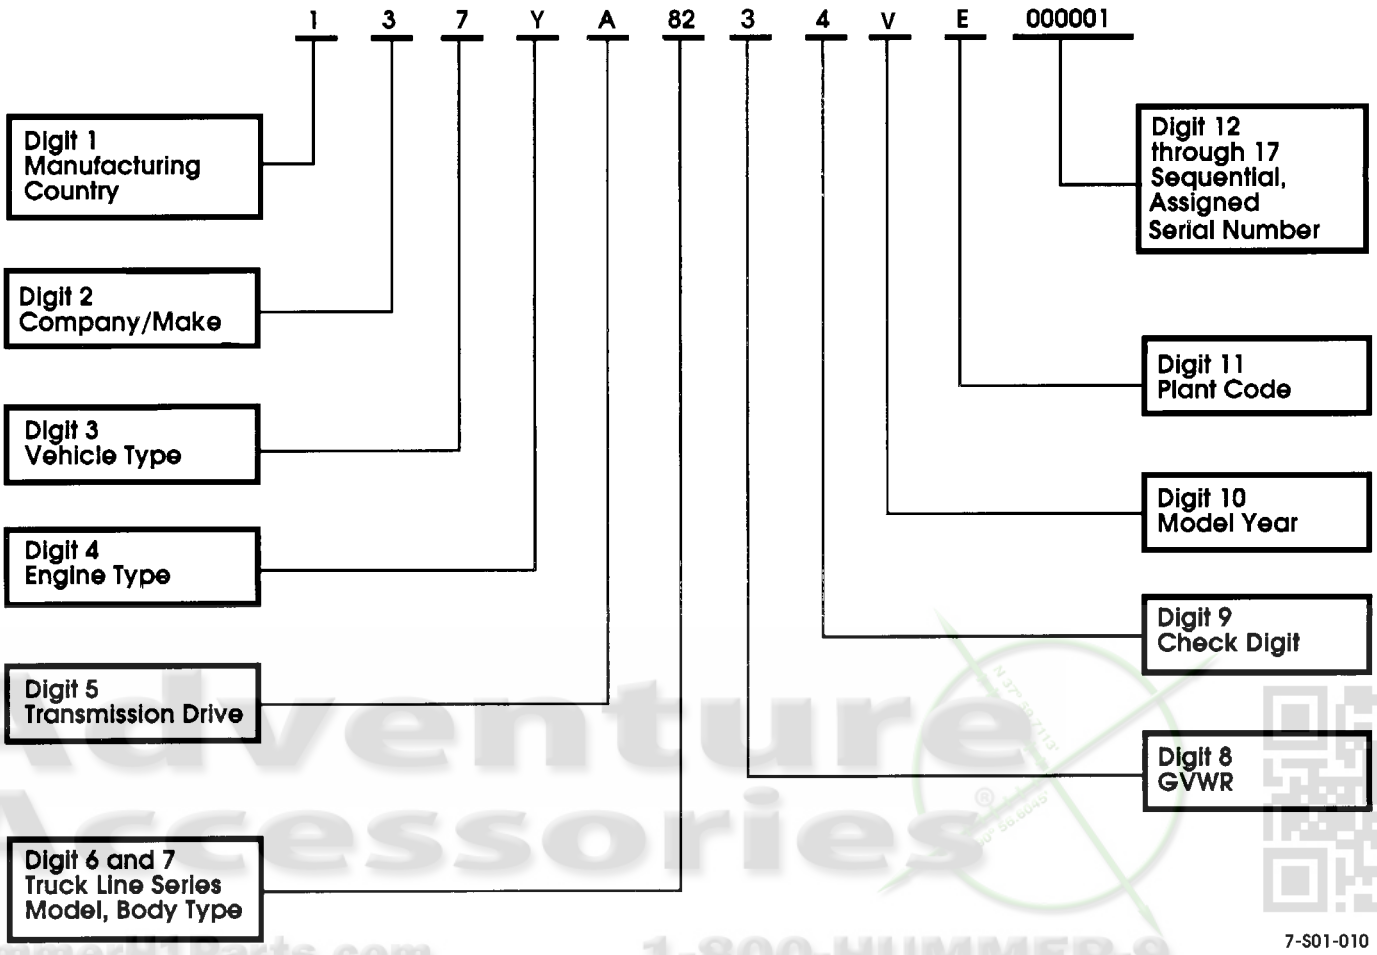

Figure 1-9: VIN Plate Location

The first twelve digits of the seventeen digit VIN are explained in the chart on the following page.

VEHICLE WEIGHTS

Non-Turbo Diesel Engine

NOTE: Fleet vehicles may have a GVWR of 10,800 lb (4,903 kg) instead of the usual 10,300 lb. (4,676 kg). The impact upon the curb weight and other weight ratings is minimal and therefore, new weight ratings for the 10,800 lb. (4,903 kg) GVWR vehicles have not been specified. Continue to follow the specifications provided for the 10,300 lb. (4,676 kg) GVWR vehicles.

Curb Weight (see Note):
- Two-Door Enlarged Cab (Hard Top) (XLC2) ..... 6,290 lb (2,856 kg)
- Four Door Open Top (w/ full doors) (HMCO) ..... 6,540 lb (2,969 kg)
- Four Door Hard Top (HMC4) ..... 6,690 lb (3,037 kg)
- Four-Door Enclosed Utility (HMCS) ..... 6,840 lb (3,105 kg)

Payload (see Note):

REPLACEMENT KEYS

Replacement keys can be cut using Briggs and Stratton or Curtis key cutting tools. Key codes are provided on an identificaion tag included with each key set (Figure 1-10).

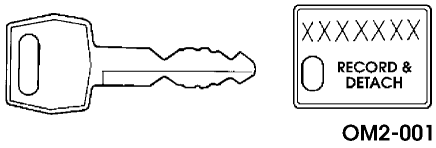

Figure 1-10: Key Code Location

REMOTE ENTRY RECEIVER/TRANSMITTER REPLACEMENT

The receiver can be programmed to work with up to four transmitters. To add, replace and/or delete transmitter:

1. Locate the unconnected gray wire with a pink or red connector taped to the remote entry harness connected to the receiver module beneath the console cover.
2. Assemble all the transmitters to be used.
3. Turn on the ignition switch.
4. Ground the pink-red connector four times in succession. The parking lamps will flash four times and the system will reset itself in the program mode.
5. Push the button on any transmitter and the lights will flash once.
6. Repeat this for the remaining transmitters for up to four transmitters. The above must be accomplished within 30 seconds from grounding the gray wire connector or the system will exit the programming mode and the procedure will have to be repeated.
7. Turn the ignition switch off following the above and check each transmitter for correct function.

REARVIEW MIRROR WITH COMPASS AND TEMPERATURE DISPLAY (OPTIONAL)

Some Hummer vehicles may be equipped with the optional rearview mirror with a digital electronic compass, outside temperature display and interior reading lamps (Figure 1-11). There should be an information card attached to the mirror. However the information is provided in the Owner's Manual as well.

The electronic compass shows forward direction in the digital display located above the rearview mirror. The compass will display the following directions: N, NW, W, SW, S, SE, E, and NE.

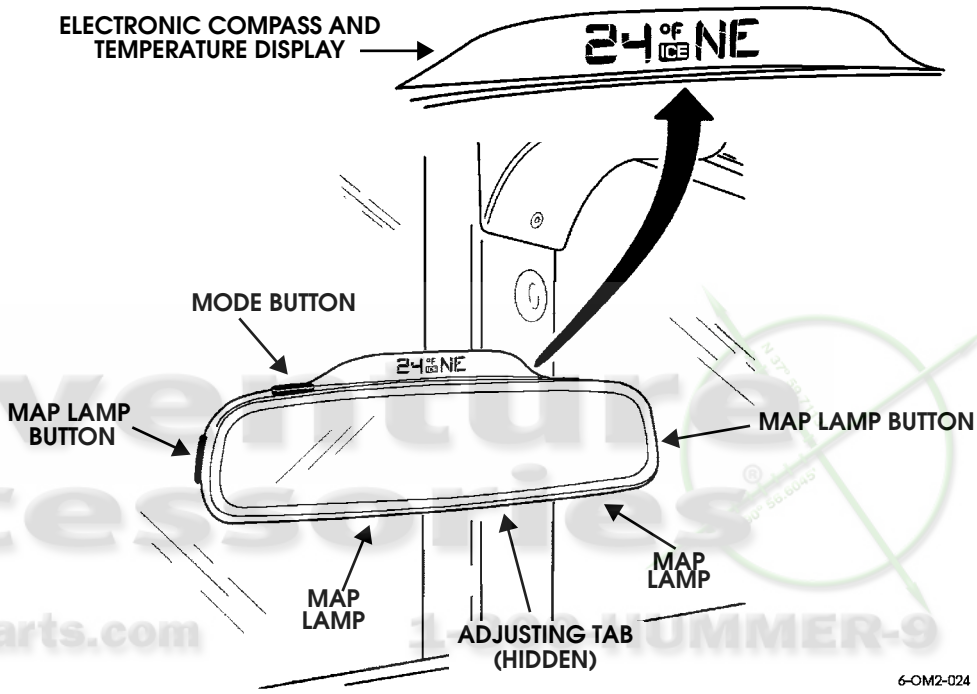

Figure 1-11: Rearview Mirror with Compass and Temperature Display

Temperature Display

The outside temperature display shows a digital temperature reading. When the temperature is less than 38 degrees, "ICE" will illuminate in the display for one minute to remind the driver to anticipate potential icy road conditions.

Compass Calibration

CAUTION: Do NOT mount Cellular or CB antennas within 2 feet of the mirror. Compass performance will be adversely affected.

The compass automatically calibrates itself as the vehicle is driven, therefore, no calibration should be required. However, if the vehicle's compass headings become inaccurate, manually calibrate the compass by following this procedure:

- Turn the ignition ON.
- Press and hold the Mode button for more than 15 seconds ("CAL" will illuminate in the display).
- Drive in at least 3 circles in an area away from long steel objects.

The display "CAL" will turn off when the compass is calibrated.

Calibration data is stored in memory so it should not have to be recalibrated if the vehicle loses battery power.

Zone Variation

The compass must be set to compensate for the difference between true north and magnetic north. To set the magnetic variation:

- Press and hold the Mode button for at least 5 seconds but not more than 10 seconds. When the ZONE symbol lights, release the button.
- Use the map to find your geographic location. Note the zone that you are in (Figure 1-12).
- Press the MODE button until your zone number appears on the display.
- The zone is set after 5 seconds of no activity of the mode button.

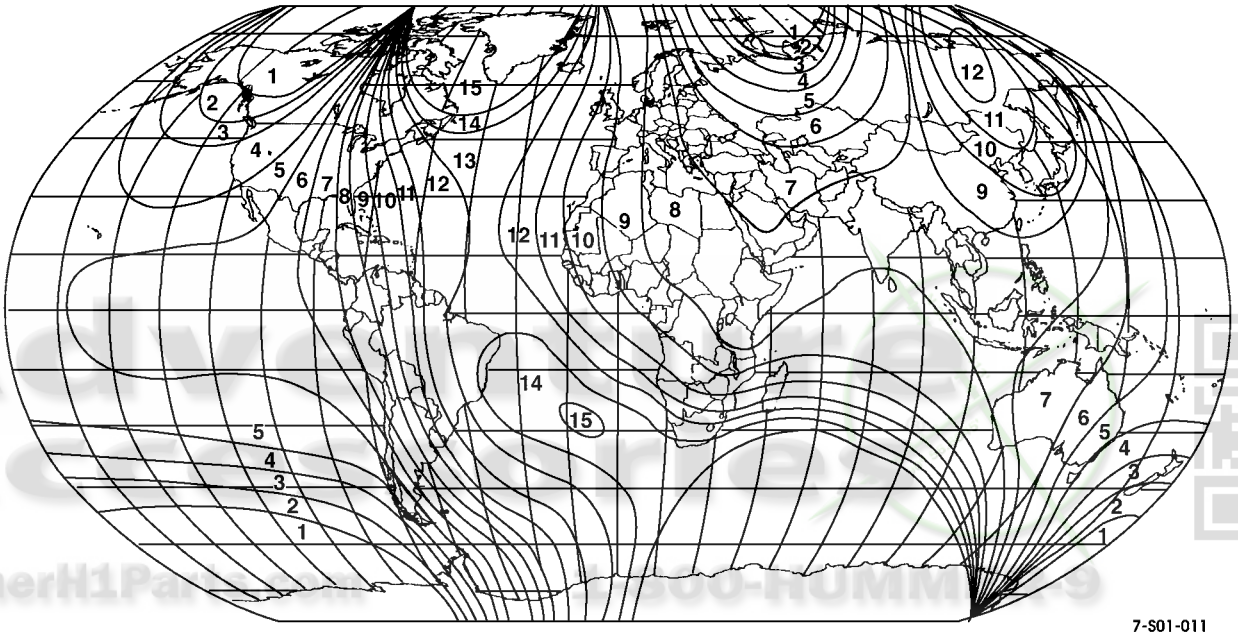

Figure 1-12: Magnetic Zone Variation

TOWING, LIFTING, JUMP STARTING

Vehicle Lifting/Jacking Points

Vehicle jacking points are shown in Figure 1-13. The vehicle can be raised with a floor jack at any of the indicated positions. Jacking can be performed at the front, rear, or at any one wheel.

In cases where the entire vehicle must be raised, use jack stands at equidistant points on the frame rails. Use a minimum of four stands to support the vehicle. Suggested capacity for individual jack stands is 3 ton, with a vertical reach of 19 in. (49 cm).

Typical jack stand placement for raising one side of the vehicle is shown in Figure 1-14. Always be sure the jack stand saddle is securely engaged and the stand is level.

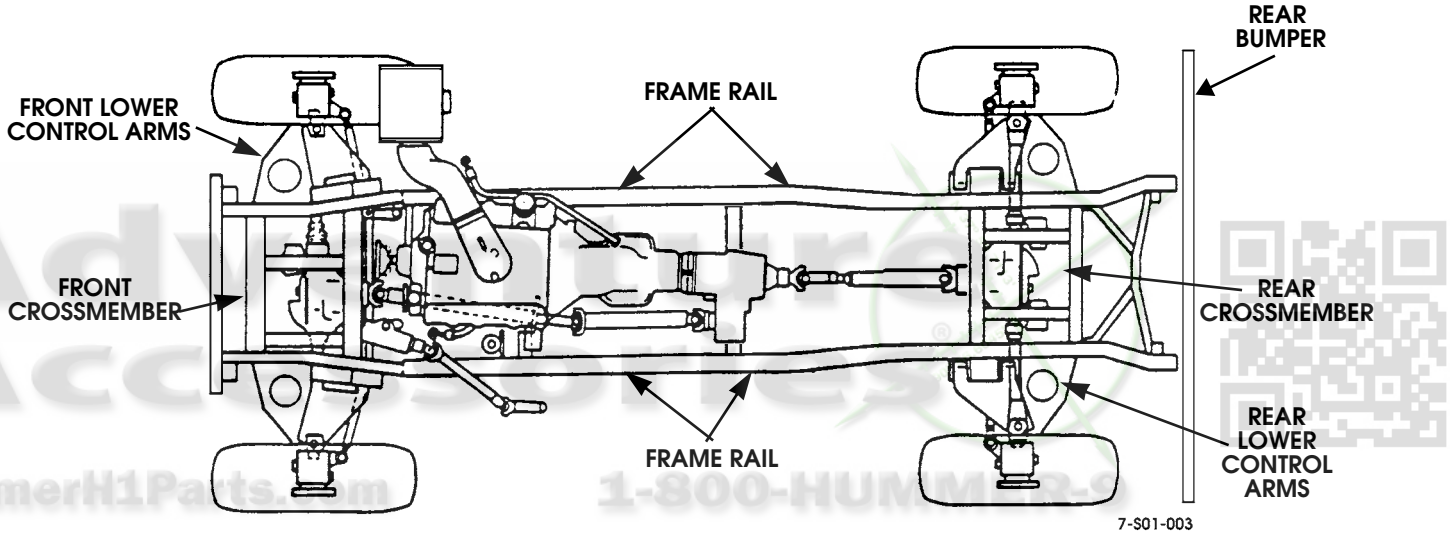

Figure 1-13: Vehicle Jacking Points

Vehicle Hoisting

Hummer vehicles can be raised on a hoist for service access. Drive-on and swivel arm hoists are both acceptable.

Hoist capacity and width are important. The greater width and weight of Hummer vehicles require a larger hoisting platform. Do not use an under capacity hoist, or modify an existing hoist for use; this practice is neither safe nor recommended.

Towing Recommendations

Hummer vehicles can be towed with wheel lift, sling-type, or flat bed tow equipment.

Flat bed and wheel lift equipment is recommended over sling type or A-frame equipment.

Towing Cautions:

- Remove or secure loads in the towed vehicle
- Never use the shackles on the front bumpers as tie down points
- Always use safety chains on sling towed vehicles
- Always follow the transmission/transfer case shift position recommendations (Transfer Case in N (Neutral); Transmission in P (Park).
- Use a low vehicle trailer for recreational towing (behind an RV or other vehicle) when possible.

Flat Bed/Wheel Lift Towing Procedures

Flat bed/wheel lift tow vehicles are highly recommended. They keep all of the towed vehicle wheels off the pavement. This is important with full time four wheel drive vehicles.

Loading only requires that the towed vehicle be raised or winched onto the towing platform. A further advantage of this type equipment is that tow speed and distance are not limited. Once the towed vehicle is loaded, set the parking brake, shift the transmission into Park and install the vehicle tie downs. Tie down attachment points are shown in Figure 1-15.

Adventure Accessories

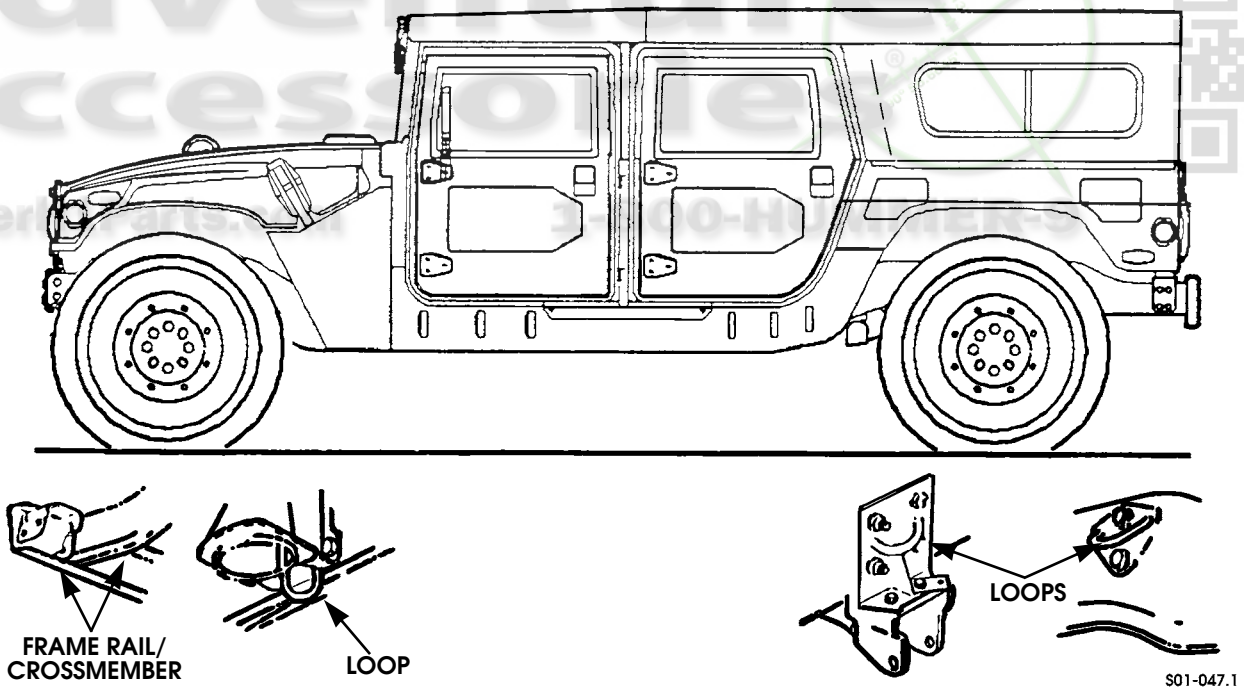

Figure 1-15: Vehicle Tie-Down Points

Conventional Towing Procedures

Front Towing

1. Loop chains around lower control arms and secure to tow sling (Figure 1-16).
2. Insert 4” x 4” x 48” length of wood between bumper and sling chains (Figure 1-16).
3. Raise front end and verify that sling is firmly positioned against front bumper.
4. Release parking brakes.
5. Shift transmission into Park and transfer case into Neutral.
6. Position tow dollies under rear wheels. Proceed with towing operations.

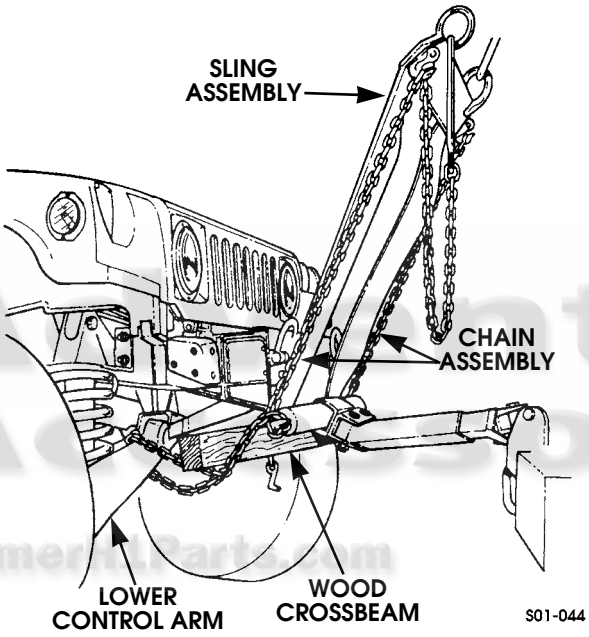

Figure 1-16: Front Towing With Conventional Equipment

Rear Towing

1. Loop sling chain around frame rails adjacent to rear crossmember and secure to tow sling (Figure 1-17).
2. Insert 4” x 4” x 48” length of wood between bumper and sling chains (Figure 1-17).
3. Raise rear end and verify that sling is firmly positioned against rear bumper.
4. Release parking brakes.
5. Shift transmission into Park and transfer case into Neutral.
6. Position tow dollies under front wheels. Proceed with towing operations.

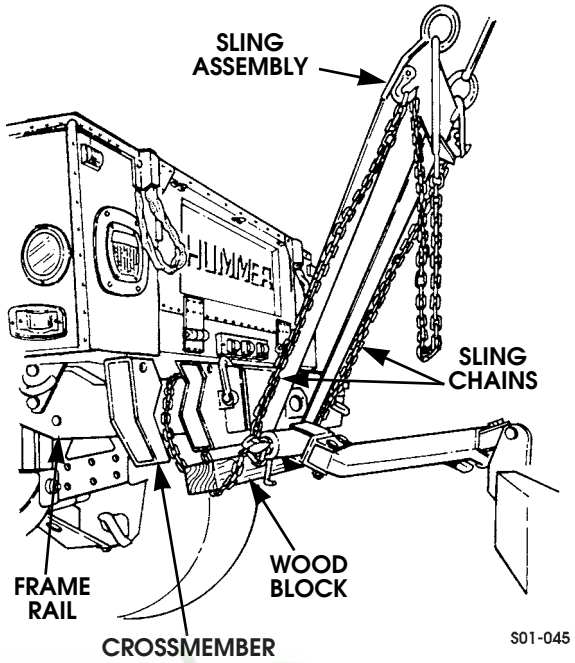

Figure 1-17: Rear Towing with Conventional Equipment

Conventional Towing When Keys are not Available

If the vehicle doors are locked and the keys are not available you cannot determine that the transmission is in Park and the transfer case is in “N” (Neutral). In these situations, you must use one of the following towing methods:

a. Use tow dollies at all wheels and flat tow,

or

b. Raise the vehicle front or rear and use tow dollies under the wheels not raised.

Recreational Towing

Hummer vehicles can be towed behind an RV if desired. A low-boy style vehicle trailer is best for this purpose. Flat towing is not recommended.

Jump Starting

Hummer vehicles can be jump started when necessary. Starting can be performed with a portable starting unit, separate booster batteries, or the battery in another vehicle.

Certain Cautions and Warnings must be observed when jump starting a vehicle. They are:

- If the battery in another vehicle is being used for jump starting, do not allow the two vehicles to touch. Contact can result in damage to the electrical system in both vehicles.
- Always connect negative to ground and positive to positive.
- Never jump start a vehicle with a frozen battery. This practice could lead to personal injury.
- Never jump start a battery when electrolyte level is below the top of the cell plates.
- Do not allow jumper cable clamps to touch after connecting them to the booster battery.
- Never allow open flame near batteries, especially during jump start operations or when batteries are charging. Personal injury could occur in either case.
- Never use 24 volt booster equipment, or equipment that is NOT negative ground. Either will seriously damage the vehicle electrical system.
- Remove all jewelry from hands and wrists to avoid arcing caused by accidental contact with battery current source.

Jump Start Procedure

1. Set parking brake and shift transmission into Park.
2. Do not jump start if low or dead battery is: frozen, cracked, has loose terminal socket, electrolyte level is below cell plates, or indicates less than 9 volts across terminals. Install temporary or replacement battery instead. However, if battery is only low on charge and is OK otherwise, proceed with jump starting.
3. Connect positive (+) jumper cable to battery positive terminal (Figure 1-18).

NOTE: An adapter may be required to connect the cables to some side mount terminals.

4. Connect negative (-) jumper cable to generator mounting bracket (Figure 1-18). Be sure cable clamp is securely attached.
5. If portable booster machine is being used, verify that machine is at 12 volt setting. Higher volt/amp settings can damage vehicle electrical system.
6. Start vehicle. Disconnect jumper cables immediately after engine startup.

MAINTENANCE SCHEDULE

Recommended Maintenance

Maintenance recommendations in this section were developed to maintain satisfactory vehicle operation. Items described in Maintenance Inspection Groups A, B, and C are important to proper operation, performance, and safety.

It is important that maintenance items outlined in the schedules be performed at suggested intervals. Regular maintenance will greatly improve vehicle reliability and longevity.

Normal Maintenance

The vehicle maintenance schedules reflect services required for normal operation. Normal operation includes city/highway driving on hard surface roads with only minimal operation on unpaved road surfaces.

Maintenance After Severe Operation

Severe operation includes extensive off-road driving, commercial use, sustained operation in high ambient temperatures, and trailer towing. This type of vehicle operation requires additional and more frequent service.

Commercial use involves regular operation as a delivery or service type vehicle. Severe off-road use involves extended operation on rough terrain, stream fording, or sustained operation in sand, mud, snow, or dirt surfaces. Severe operation also includes prolonged daily operation in heavy traffic when ambient temperatures are high.

The additional maintenance required immediately after severe off-road operation is as follows:

a. Wash the vehicle underbody, driveline and brake components, and all steering linkage and suspension parts with a low pressure water spray.

b. If vehicle was driven over rough terrain, examine the underbody and driveline components for impact damage. Also check for leaks and loose parts.

c. If vehicle was driven in salt water, thoroughly rinse the vehicle underbody, driveline and brake components, all linkage and suspension parts with a low pressure fresh water spray.

d. If the vehicle was driven through deep water, examine lubricant in the geared hubs and axles for water contamination. Drain and change the lubricant if necessary. Also clean the axle and hub vents if required.

e. Check the front/rear brake shoes for contamination by dirt, mud, sand, etc. Replace the shoes if foreign material has become embedded in the lining. However, if the shoes are only wet from water, allow them to air dry, or drive the vehicle about 1/4 mile with the brakes lightly applied to heat and dry the shoes.

f. Check transmission/transfer case fluid level and condition. Drain and replace the fluid in either assembly if water contamination is evident. If water contamination proves extensive, it will also be necessary to replace the transmission fluid filter, and flush the fluid coolers and lines.

g. Lubricate the steering linkage, ball joints, propeller shaft, and body lubrication points.

h. Check the brake and power steering fluid levels and top off as needed.

i. Examine the engine air filter. Replace the filter element if necessary and clean the air filter housing and dust unloader.

j. Change engine oil and replace engine oil filter if contamination is suspected.

Maintenance Inspection Groups A-B-C

The inspection groups outline additional components to be checked at stated mileage intervals. The intervals are described in the Vehicle Maintenance Schedule. Perform necessary service repair, replacement, or adjustments as each inspection item is checked.

Maintenance Inspection Group A consists of the following items:

- Check fluid levels and condition for power steering pump, cooling system (reservoir and surge tank), brakes, transmission, transfer case, geared hubs, and axles.
- Check CDR valve for oil saturation.
- Inspect condition of control arms, springs, and shock absorbers.
- Check tire wear and condition.
- Lubricate all grease fittings and body lubrication points.
- Inspect geared hubs for leaking seals or damage.
- Inspect service brakes and parking brake.
- Check axles for leaks or damage.
- Check wheel bolt and nut torque.
- Inspect condition of geared hub and axle vent lines.
- Inspect condition of transmission and transfer case vent lines.
- Inspect U-joints for wear or missing/damaged grease fittings.
- Inspect transmission/transfer case shift linkage for wear, binding, distortion.
- On non-turbo models, inspect accelerator linkage for wear, binding, loose, excessive play.
- Inspect condition of engine mounts and insulators.
- Check fuel filter and drain/clean if necessary.
- Check CTIS operation. Verify that system inflates/deflates tires and has no leaks.
- Check winch operation (if equipped) and cable condition. Pay-out and pay-in at least 30 feet of cable.
- Check ball joints for wear.
- Test drive vehicle and complete a functional check of all systems.
- Check air cleaner.

Accurate Auto Accessories
HummerParts.com 1-800-HUMMERS

Maintenance Inspection Group B consists of the following items:

- Inspect fuel injection pump, lines, and fittings for leaks or damage.
- Check battery voltage and condition. Clean battery exterior with ammonia/water or baking soda/water mixture.
- Inspect serpentine belt condition.
- Inspect exhaust system and shields.
- Inspect and rotate tires.
- Inspect halfshaft boots and ball joint seals.
- Inspect condition of steering column, U-joints, tie rods, steering arm, center link, and idler arm.
- Check fuel tank vent line filter.
- Inspect condition of frame rails and crossmembers.
- Check A/C system operation.
- Check wheel alignment.

Maintenance Inspection Group C consists of the following items:

- Inspect surge tank, radiator and shroud, A/C condenser, power steering and transmission coolers, and all hoses and fittings for security of mounting, leaks, or damage.
- Inspect fuel tank, lines, and cap.
- Inspect all wiring harnesses for frays, splits, missing insulation, poor connections.
- Inspect power steering pump, power steering gear, hoses, lines, and fittings for leaks or damage.

NOTES

Some maintenance may require the use of specialized knowledge or equipment and may be best handled by qualified service technicians at your nearest HUMMER service center.

After your vehicle has been driven for 63,000 miles (101 370 km) repeat the schedule, starting at 3,000 miles (4 800 km).

RECOMMENDED FUEL/FLUIDS/LUBRICANTS/ CAPACITIES

Recommended Fuel

Recommended fuel for 6.5L NA diesel and turbo diesel engines is #2 diesel. Do not use any other type fuel.

Engine Oil (Figure 1-19)

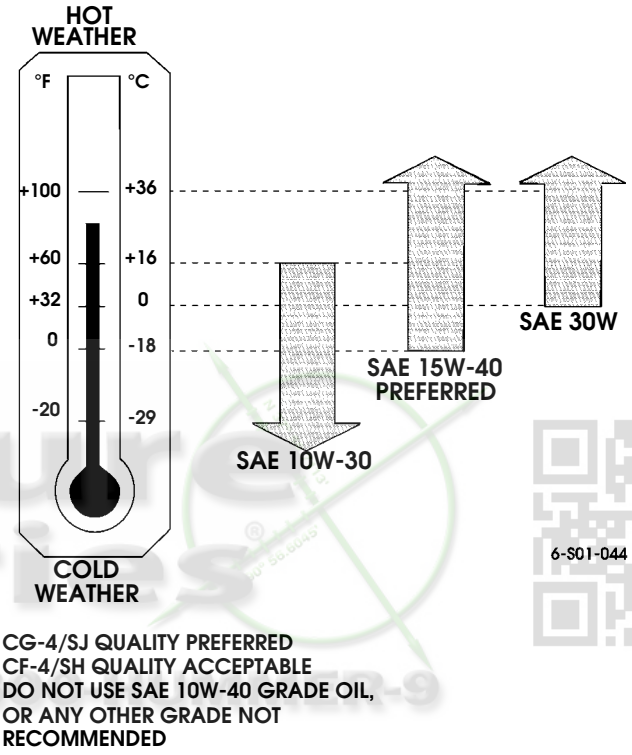

Figure 1-19: Oil Viscosity Chart

Diesel engine oil capacities are:

- 7.0 qts (6.6L) without filter change
- 8.0 qts (7.6L) with filter change
- 2.0 qts (1.9L) for engine oil cooler

Refer to Section 2 for more information regarding engine oil.

Engine Coolant

Recommended engine coolant is a mixture of ethylene glycol antifreeze and water.

Use a mixture containing 50% antifreeze and 50% water.

Radiator capacity is 7 qts (6.6L). System capacity is approximately 26 qts (25L).

Transmission/Transfer Case/Steering Gear and Pump Fluid

Recommended lubricant for the transmission, transfer case, and steering system is Dexron III automatic transmission fluid.

Approximate fluid capacities are:

- 1 qt (0.95L) for the steering gear and pump
- 7 pints (3.3L) for the transfer case
- 13.5 qts (12.8L) for the transmission, converter, and cooler
- 7.7 qts (7.3L) for the transmission (during fluid drain/refill)

Brake Fluid

Recommended brake fluid for all Hummer vehicles is DOT 5 silicone brake fluid. Master cylinder approximate capacity is 0.7 pints (0.33L). Brake system approximate capacity is 1.2 pints (0.6L).

Front/Rear Axle and Geared Hub Lubricant

Recommended lubricant for axles and hubs is a heavy duty, multipurpose, API GL-5 gear lubricant, with viscosity ratings of 80W-90 or 75W-90.

The 80W-90 is an all purpose lubricant. The 75W-90 lubricant is suggested for use in areas where winter temperatures are consistently below freezing.

Steering Linkage and Suspension Lubricant

Recommended lubricant for steering and driveline components is an NLGI LB, or GC-LB grade multipurpose chassis grease. Use only those lubricants that display the NLGI certification symbol.

Body Lubrication

Door hinges, linkage parts, cables, and other body components can be lubricated with a number of different lubricants. Suggested lubricants and applications are:

- Window regulator mechanisms – spray white grease
- Window slides – silicone spray lube
- Door hinges – engine oil, ATF, or LPS brand spray lube
- Linkage/cables – LPS brand silicone spray lube
- Lock strikers – chassis grease, white grease, or LPS #3.
- Seat track – multipurpose chassis grease (NLGI-LB)
- Lock mechanisms –ATF, silicone spray lube, graphite lube

A/C Refrigerant and Compressor Oil

The only refrigerant that can be used is R-134a. No other refrigerant is recommended.

The only compressor oil recommended is PAG (polyalkylene glycol). It is the only oil compatible with refrigerant R-134a. No other oil is recommended. Any PAG oil used should be compatible with General Motors specifications.

A/C system capacities are:

- 8 fluid ounces (237 ml) of PAG oil (front unit only)
- 10 fluid ounces (295 ml) of PAG oil (with aux. A/C)
- 2.1 lb (0.95 kg) refrigerant (front unit only)
- 2.3 lb (1.04 kg) refrigerant (with aux. A/C)

LUBRICATION AND MAINTENANCE ITEMS

Engine Oil Level

The engine oil dipstick is at the driver side of the engine (Figure 1-20). Correct oil level is to the FULL mark. Acceptable level is in the crosshatch area below the FULL mark.

Check oil level only when the engine is shut down and the vehicle is on a level surface. Wait one minute after shut down to check.

Never overfill the engine. The excess oil will be churned into foam causing oil film breakdown and consequent engine damage.

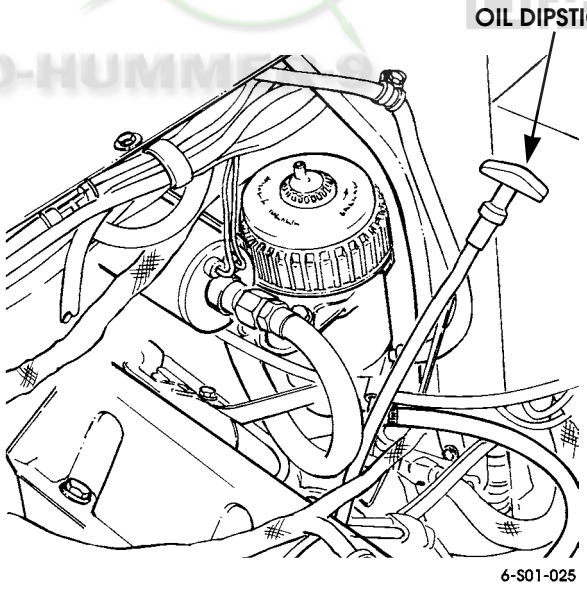

Figure 1-20: Oil Dipstick Location

Adventure Accessories
Hummer Parts 1-800-HUMMER-6

Engine Oil and Filter Change

The oil filter is located on the driver side of the engine (Figure 1-21). A front mounted fill tube is used (Figure 1-22).

The spin-on oil filter is only removed with a standard band-type tool. Coat the seal on a new filter with oil and clean the adapter surface before installation. Tighten the filter by hand.

The oil pan drain plug has a gasket that should be replaced if cut, cracked, or distorted. Check the gasket seating surface on the oil pan. Burrs or nicks can be smoothed with a fine tooth file. Also replace the drain plug if the threads are worn or damaged. Be sure the plug is tightened to required torque of 20 lb-ft (27 N•m).

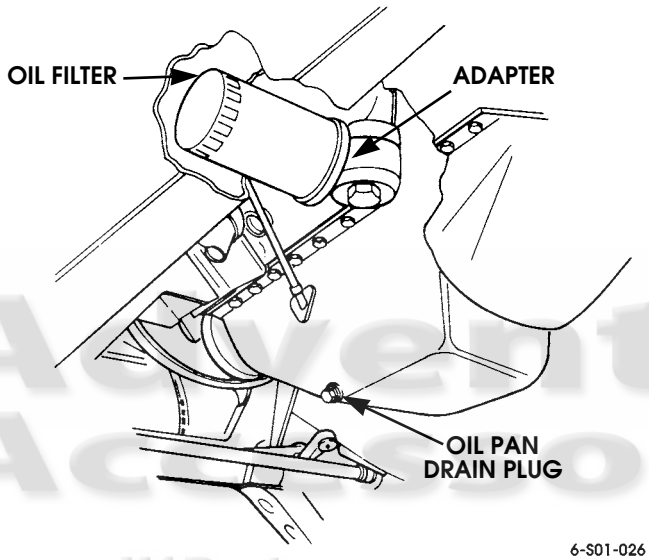

Figure 1-21: Oil Filter/Drain Plug Location

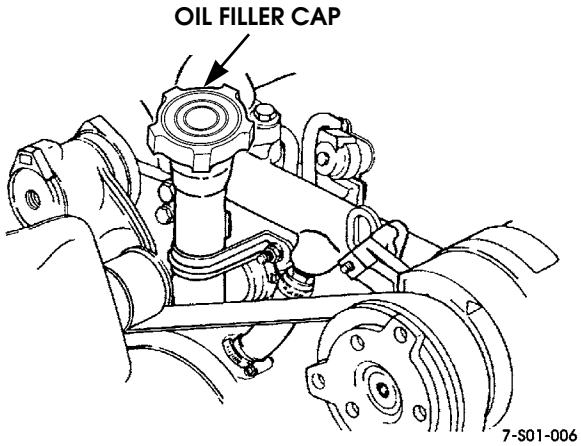

Figure 1-22: Engine Oil Fill Location

Fuel Filter Service

Replace the filter element every 6,000 mi (9 600 km), or annually, whichever occurs first (Figure 1-23).

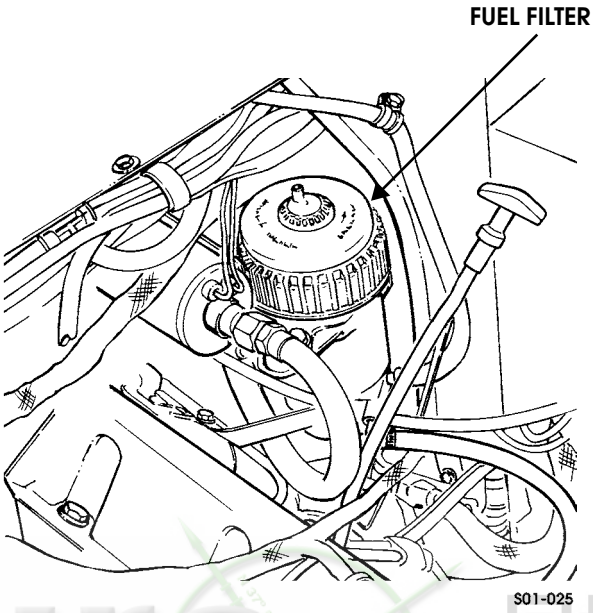

Figure 1-23: Fuel Filter Location

Transmission Fluid

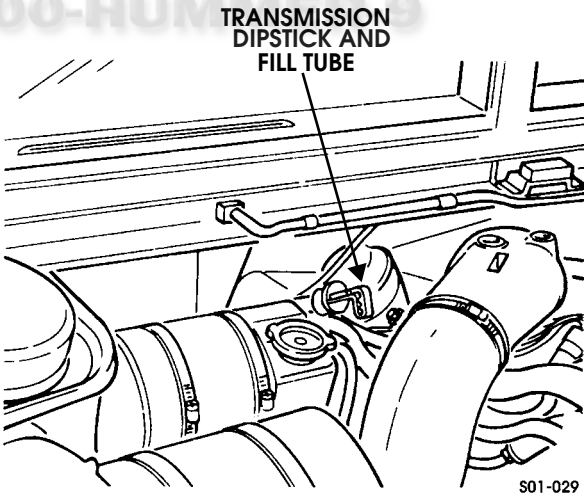

Figure 1-24: Transmission Dipstick Location

Replace the transmission fluid filter each time the fluid is changed. Refill the transmission with Dexron® III afterward.

Check transmission fluid level at least once each month. Procedure is as follows:

Adventure Accessories
HummerH1Parts.com 1-800-HUMMER

1. Drive vehicle until transmission fluid is at normal operating temperature. Fluid must be hot to obtain accurate reading.
2. Position vehicle on level surface.
3. Shift transmission into Park.
4. Operate engine at curb idle speed.
5. Remove transmission dipstick and check level (Figure 1-24). Correct level is within crosshatch marks on dipstick.
6. If fluid level is too high, remove excess through fill tube using suction gun and 3/16-in. teflon tubing. If level is low, check for leaks and, if OK, add fluid in 1-2 ounce increments until level is correct.

CAUTION: Do not overfill the transmission. The excess fluid will be churned into foam resulting in overflow from the fill and vent tubes, slip and flare during upshifts, fluid breakdown and eventual clutch failure.

7. Check fluid color and condition. Normal color ranges from dark red to light pink. Fluid that is dark brown, black, or orange and full of bubbles indicates a problem that may require overhaul.

Transfer Case Fluid

Check transfer case fluid level every 3,000 mi (4 900 km), or semiannually, whichever comes first. Remove fill plug and gasket. Level should be within 1/2 in. (12.7 mm) of fill plug opening when transfer case is level. Install fill plug and gasket, and tighten to 35 lb-ft (48 N•m). Change fluid every 12,000 mi (19 000 km) or annually, whichever occurs first (Figure 1-25).

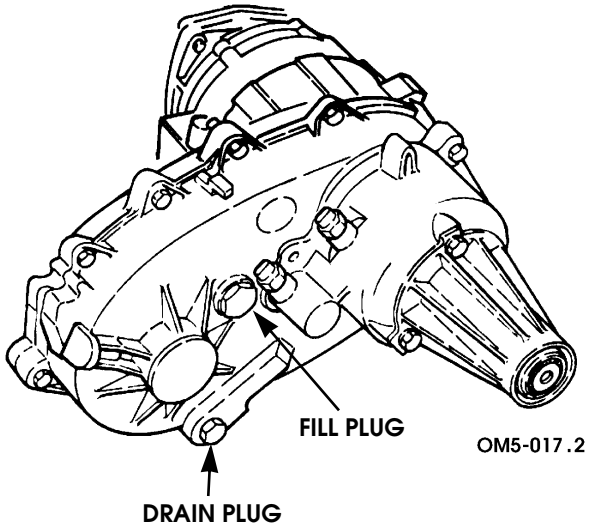

Figure 1-25: Transfer Case Fill/Drain Plug Location

Axle and Geared Hub

Check axle and hub lubricant condition and level every 3,000 mi (4 800 km) or semiannually, whichever occurs first.

Geared hub level should be within 1/2 in. (12.7 mm) of fill plug opening when lubricant is cold, or to plug level when hot.

Axle level should be within 1/4 in. (6.4 mm) of fill plug opening when lubricant is cold, or to plug level when hot (Figures 1-26 and 1-27).

Change axle and hub lubricant when contaminated by water or foreign material.

Use GL-5, SAE 80W-90 or 75W-90 gear lubricant only.

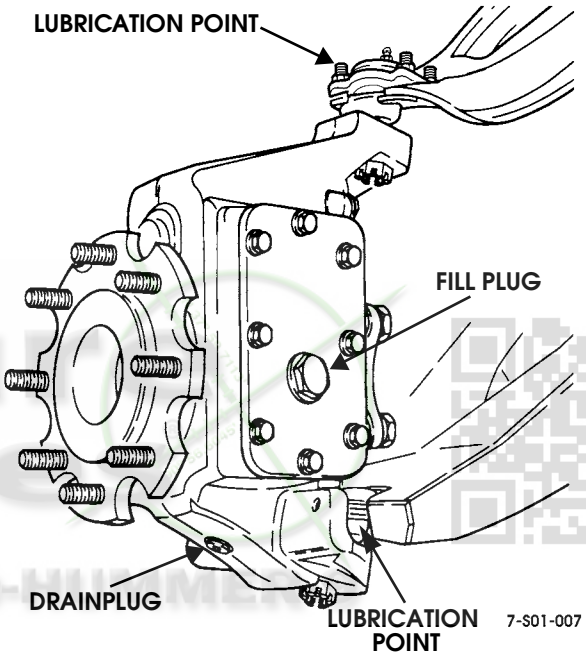

Figure 1-26: Geared Hub Fill/Drain Plug Locations

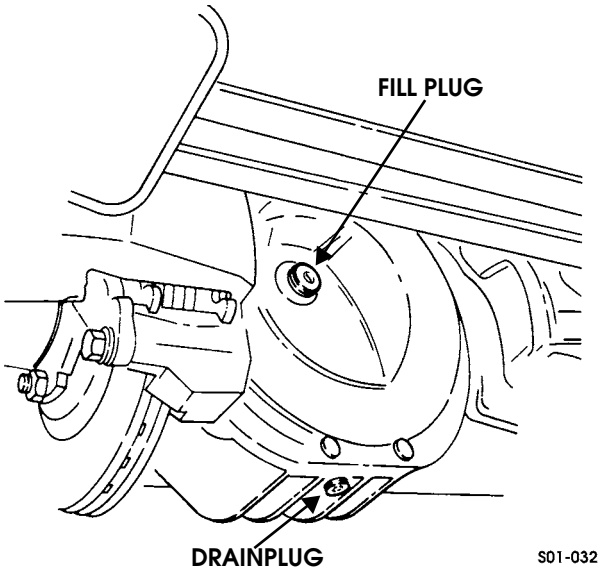

Figure 1-27: Axle Fill/Drain Plug Locations

Universal and Slip Joint Lubrication

Lubricate U-joints with a multipurpose, NLGI-LB grade chassis grease.

Lubricate propeller shaft universal and slip joints every 3,000 mi (4 800 km), or semiannually, whichever occurs first. Use a hand operated or low-pressure air powered lubrication gun. If operating conditions are severe service at 1,000 mi. (1 600 km) intervals.

The rear propeller shaft U-joints have two grease fitting locations (Figure 1-28). The front shaft has four fitting locations (Figure 1-29)

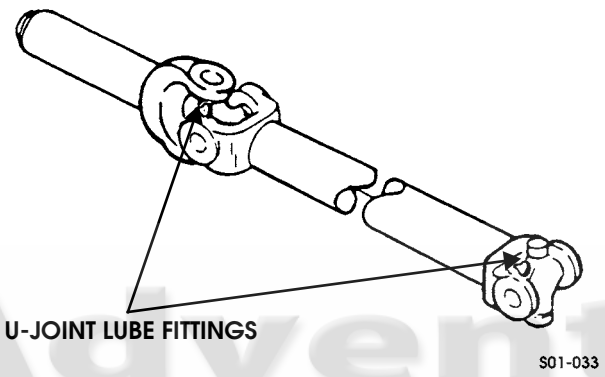

Figure 1-28: Propeller Shaft Lube Points

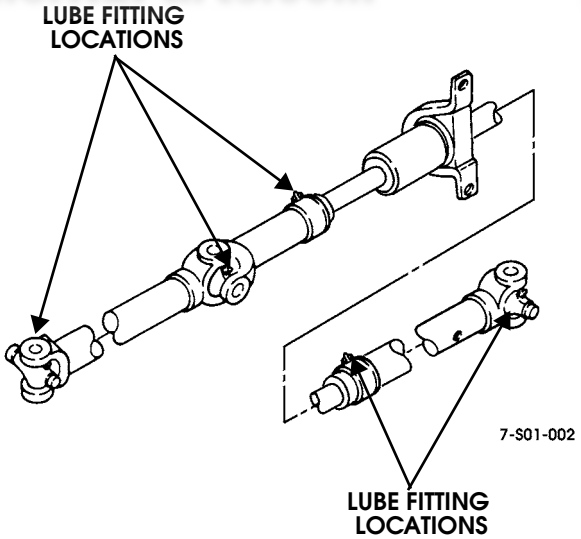

Figure 1-29: Front Propeller Shaft Lube Points

Steering and Suspension Lubrication Points

Lubricate steering and suspension components every 3,000 mi. (4 800 km), or semiannually, whichever occurs first. If operating conditions are severe, service at 1,000 mi. (1 600 km) intervals.

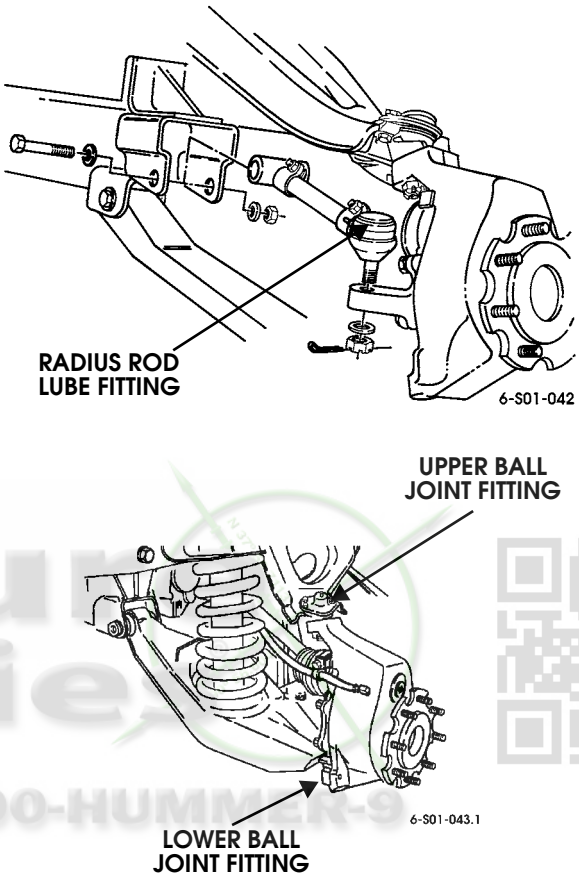

Figure 1-30: Ball Joint/Radius Rod Lube Points

Suspension lube points include the upper and lower ball joints and the rear suspension radius rods (Figure 1-30). Steering lube points include the tie rod ends, idler arm, steering arm, and intermediate steering shaft (Figure 1-31 through Figure 1-33).

Use a hand operated or low pressure air powered lube gun filled with a multipurpose chassis grease. NLGI-LB classification lubricating grease is recommended.

Power Steering Fluid

Check the fluid level in the power steering reservoir monthly and adjust level as necessary. If fluid is hot, level should be between "HOT" and "COLD" marks on the cap indicator. If fluid is cool, level should be between "ADD" and "COLD" marks. In either condition, level must be above "ADD" mark.

NOTE: Power steering fluid does not require periodic replacement.

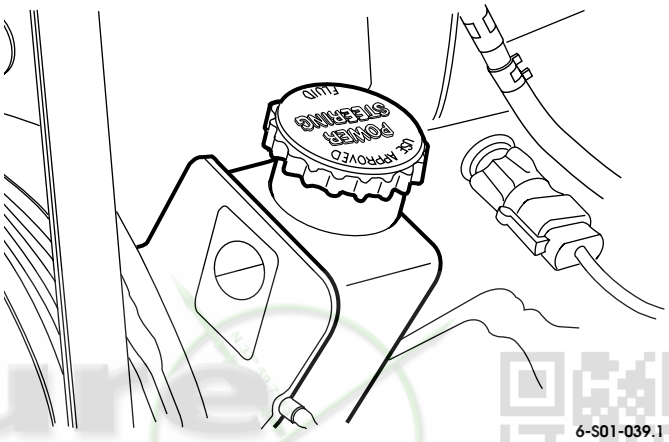

Figure 1-34: Power Steering Pump Reservoir

Cooling System Fluid Level Check

Check coolant level at the surge tank monthly and adjust level as necessary. Level should be at, or above, the cold fill line (Figure 1-35).

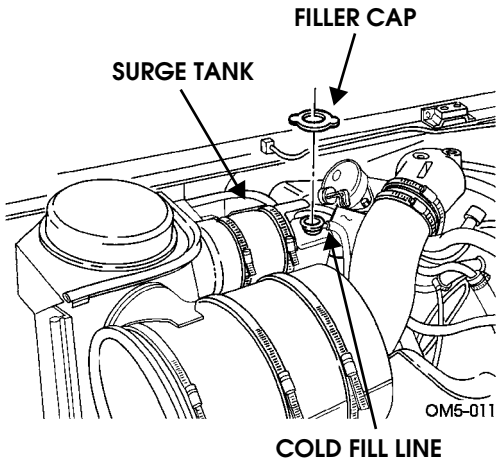

Figure 1-35: Surge Tank Coolant Level Indicator Location

HummerH1Parts.com 1-800-HUMMER3

Master Cylinder Fluid Level Check

CAUTION: Use DOT 5 silicone brake fluid only. Failure to use the proper fluid may affect brake performance or damage brake components.

NOTE: Brake fluid does not require periodic replacement.

Check master cylinder fluid level monthly. Correct fluid level is to within 1/8 in. (3.2 mm) from the top of each reservoir rim.

Clean the master cylinder cover and exterior before checking fluid level. Dirt on the cover must not be allowed to enter the reservoirs.

To check fluid level, rotate the bail wire inboard and off the cover (Figure 1-36). Then lift the cover and diaphragm off the cylinder. Fluid should be from 1/4 to 1/8 in. (6 to 3 mm) below reservoir rim. Add DOT 5 fluid if necessary and reinstall the cover and diaphragm.

NOTE: Replace the cover diaphragm if cut, torn or distorted. Also be sure it is correctly seated, otherwise leakage may occur.

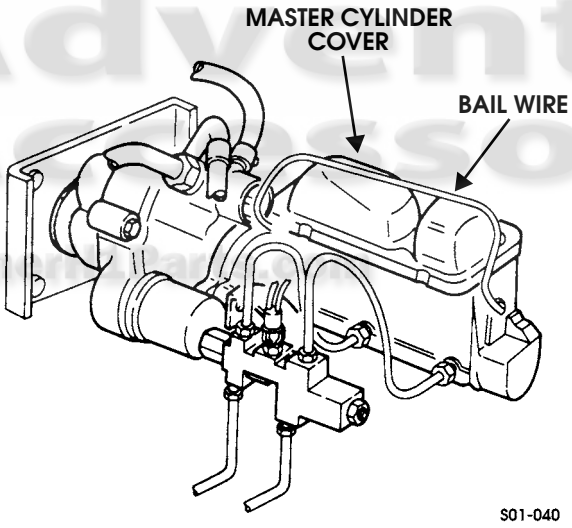

Figure 1-36: Master Cylinder Cover and Bail Wire Location

Wheels/Tires/CTIS

Inspect tire and wheel condition. Look for loose wheel nuts and rim stud nuts, or dented, deformed wheel rims. Note tire tread wear and sidewall condition. If the vehicle is used for extensive off road operation, check the sidewalls for bulges, bead damage, cuts, fabric breaks.

If the tire treads are worn, note type of wear. If wear is only on one shoulder, toe setting or camber may be incorrect. If tires are scalloped or worn at crown only, or both shoulders, inflation pressures are probably incorrect.

If the vehicle is equipped with CTIS, cycle the system and check operation. Verify tire inflation pressures with an accurate gauge.

Serpentine Belt

Replace the belt if frayed, cut, or torn. Minor, small surface cracks within the belt grooves are normal. Do not replace the belt unless cracks extend all the way through or across the belt face.

CDR Valve

Clean or replace the valve if oil soaked, or if it won't sustain vacuum/atmospheric pressure testing. Also replace the valve hose if cracked, brittle and hard.

Advantage Accessories
1-800-HUMMER-9

Body Lubrication Points

Every 6 months or 3,000 mi (4 800 km), whichever occurs first, lubricate the: accelerator linkage, hood hinges, hood stops, tailgate hinges, door hinges, door handles, parking brake lever, service brake pedal push rod stud, transfer case shift linkage, and transmission shift linkage (Figure 1-37). Suggested lubricants include engine oil or ATF for hinges; LPS silicone lube for linkages, handles, and brake push rod; white grease for seat tracks, window regulators and park brake lever. Door locks should use a graphite based lubricant such as Lock-Eze. Refer to the Recommended Fuel/Fluids/Lubricants/Capacities section for more detailed lube information.

Check condition of the spare tire and swing away carrier mechanism, if equipped. Be sure the spare is properly inflated and the carrier operates smoothly, without bind.
